

Neurosyphilis Screening Questions

Neurosyphilis, Ootosyphilis, and Ocular Syphilis can cause severe health issues; timely screening and treatment are essential for effective prevention and management. These manifestations can occur at **any stage** of Syphilis.

Neurosyphilis

Are you experiencing:

- Headaches?
- Difficulty concentrating?
- Confusion?
- Personality changes?
- Difficulty walking or issues with your legs?

Ootosyphilis

Are you experiencing:

- New trouble hearing?
- Ringing in your ears?

If yes, refer to ear, nose and throat (ENT).

Ocular Syphilis

Are you experiencing recent changes in vision, such as:

- Blurriness?
- Flashing lights?
- Spots that move or float by?

If yes, refer to ophthalmology.
